

Marco Antonio De Araujo

DESENVOLVEDOR BACKEND PLENO

Profile

My name is Marco Antônio, I'm 26 years old, I'm currently in my 4th semester of Information Systems, I'm passionate about technology, solutions and products,

I currently work as a Full Backend Developer, being responsible for the fiscal squad and nitro squad, where I actively participate in the creation of new features, implementation of new application architectures, and implementation of continuous improvements.

I am extremely organized, humorous and like to document all my tasks and share knowledge so that the team is always aligned.

Employment History

Software Engineer Mid Level, Yooga Tecnologia, Vitória

FEBRUARY 2022 – PRESENT

I work as a Backend Developer at Squad Fiscal, focused on implementing solutions to meet the demands of tax legislation. During my career, I have contributed to the development of various functionalities, including the creation of APIs, integrations with external systems and process automation.

My main responsibilities and achievements include:

- **WhatsApp API project:** I developed a comprehensive solution to allow customers to perform integrations with the WhatsApp bot, making it easier to send messages and contributing significantly to increasing the company's revenue. This tool offers an additional plan of value that clients can incorporate into their strategies, guaranteeing the security of receipts and avoiding scams and fraud from potentially malicious clients.
- **Development of the Fiscal Back Office:** I created an internal tool that displays outstanding invoices from clients, allowing the CXM team to analyze and correct invoices with errors. This prevents the end customer from having to deal with these issues, improving the user experience.
- **Webhook API implementation:** I developed and implemented a webhook API to process delivery messages for the end customer. This API integrates with the WhatsApp API and listens to messages triggered in Redis, assembling and sending status messages (Order Accepted, Canceled, Delivery) to WhatsApp.
- **Automation of WhatsApp Bulletins:** I developed a feature to send a daily report via WhatsApp with all the sales channels for each client to their managers. Using RabbitMQ for messaging, this performative approach allows managers to monitor the performance of their business, stocks and cash in a practical and efficient way.
- **Invoice Entry and Issuance**
- **Development of CRM functionalities**
- **Integration with Sintegra**
- **Product inventory management**

These initiatives and responsibilities have contributed to improving operational efficiency and customer satisfaction, ensuring compliance with tax regulations and strengthening the company's position in the market.

- Prisma ORM | TypeORM
- NestJS
- WebSocket

Full Stack Enginner , Etaure, Vitória

NOVEMBER 2020 – FEBRUARY 2022

I worked as a Full Stack developer on 2 projects.

Smile Project:

In the team, I worked as a FullStack developer, contributing to crucial implementations in internal management. My dedication was reflected in the optimization of processes and the delivery of innovative solutions to improve operational efficiency.

Each-one project:

I took on the role of backend developer, leading the complete flow of authentication, password recovery and user/coordinator creation. My responsibility in this project included ensuring the robustness and security of operations, providing a fluid and secure user experience.
